FAUS

FAUS INTERNATIONAL FLOORING

FAUS INTERNATIONAL FLOORING counts with over more than 60 years of experience, in which the constant need for innovation and improvement, together with the strong commitment to sustainability, have been key.

The production process takes place at our facilities, where we are constantly looking for aesthetic and resistant solutions, suitable for any type of space.

The pioneering technological commitment combined with the constant evolution, provides FAUS products with a unique appearance and qualities.

OUR ENVIRONMENTAL PROMISE

At FAUS we are committed to the environment, and our manufacturing process is the proof of it. During our manufacturing processes, we implement measures such as the reduction of raw materials, recycling of waste and minimization of energy consumption. All focused on reducing the environmental footprint.

To reinforce our commitment to the nature and environment, FAUS is part of the PEFC (Programme for the Endorsement of Forest Certification) which promotes the sustainable management of forest and the FSC (Forest Stewardship Council).

SUSTAINABLE DEVELOPMENT

The decisions and actions of the present, condition the wellbeing of the planet and our future generations. This is the reason why at FAUS we focus our practices on promoting sustainable developments by seeking a balance between economic growth, care for the environment, and the wellbeing of our employees.

HOW FAUS DESIGNS ARE CREATED:

“ ACHIEVING THE REALISM OF THE WOOD GRAINS”

EXCLUSIVE AND UNIQUE DESIGNS

We create our designs based on the needs of our customers.
With an artisanal and fine-tuned methodology, we achieve the soul of each wood grain in our products.

“ DESIGNS CREATED WITH THE ESSENCE OF FAUS ”

REALFEEL

Hyper-realistic floors that emulate to a 100% every detail of the noble materials. Caress each grain, knot, or pore of the wood with your fingertips, feel the roughness of the stone and enjoy the smoothness of ceramic materials. All without losing the warmth and comfort offered by laminate flooring

“ EMBOSSED IN REGISTER WOOD”

Different finishes: STONES AND WOOD

At FAUS we have a wide variety of laminate flooring finishes, we design and mimic with perfection real wood, stones, cement, and hydraulic finishes.

“ DIFFERENTIATING EFFECTS ”

We provide our products with texture to emulate to the perfection each wood grain and knot. For the concretes, we simulate a rougher and matter finish. As for the hydraulics, these are provided with a tile effect.

JOINTS

VISIBLE OR INVISIBLE

In laminate flooring, there are several bevel options, they can be made visible or invisible.

Without having an actual joint, we can create the effect of a bevel by having it painted, pressed, or marked in different depths.

PRESSED BEVEL

4V BEVEL

JOINTGUARD

The JOINTGUARD technology fully protects the joints in between planks. This technology extends the surface protection of the planks into the edges, preventing deterioration caused by friction and thus extending the duration of the floor.

“ WE PROTECT OUR JOINTS”

FLOORING SUITABLE FOR HUMID AREAS

ALL THE ADVANTAGES AND APPLIED TECHNOLOGIES MAKE IT POSSIBLE FOR OUR FLOORING TO BE INSTALLED IN ALL TYPES OF ROOMS, EVEN IN HUMID AREAS.

WE WORK WITH THE AQUA-0 TECHNOLOGY, USING WATERPROOF MATERIALS, WATER REPELLENT COMPONENTS AND EXQUISITE MANUFACTURING.

The boards we use are of high-density with a waterproof treatment, this means that the swelling of the board is <9%. The tongue and groove of the planks have a hermetic anchoring system, which seals the joints perfectly.

“ WATERPROOF CORE ”

The joints that form in between planks are fully protected thanks to the FAUS patented technology, JOINTGUARD. This technology protects the edges from water spills. The board also incorporates a water-repellent treatment to repel moisture and to protect the joints by sealing the edges.

“ THE SURFACE REPELS WATER

Thanks to the protected surface, **FAUS Aqua-0,** the designs that count with the **Jointguard®** technology, guarantee a water resistance period of up to **48 hours.**

For those designs counting with the **Interplank®** technology, the water-resistant period is of **24 hours.**

“ PERFECT FOR KITCHENS & BATHROOMS ”

If desired, a **24-hours** water-resistant period can be added by applying the **Clicseal** joint sealer to the anchoring system (both longitudinally as transversally). Flexible silicone must also be applied to the installation perimeter. *

OTHER LAMINATE FLOORING

FAUS LAMINATE FLOORING

*This way, the designs with **Jointguard®** will offer a water resistance period up to **72 hours,** as for those with the Interplank® technology it will offer a water resistance period up to **48 hours**.

WARRANTY*

To ensure the durability of our FAUS FLOORS it is essential to meet the following recommendations:

- FAUS FLOORS should be installed on top of a FAUS insulation blanket (underlay).
- Keep an expansion gap around the perimeter of the room, as well as around any fixed objects.
- Cleaning should be done with a vacuum cleaner or a mop. When using a cloth or wet mop, make sure to wring it out completely.
- Do not use ammonia, bleach, or products with soap. Only use nonabrasive and PH neutral products.
- Please visit www.faus.international for further maintenance and installation instructions.
- 5 years of Commercial Use Warranty.
- 5 years of Kitchen and Bathroom Warranty.

In accordance with the warranty conditions specified at www.faus.international
